

SUMMARY

Full-stack and cloud-native engineer (JavaScript/TypeScript) focused on Next.js, React, and modern web APIs. Experience building scalable web applications with modern frontend frameworks, cloud-based architectures, CI/CD pipelines, and performance optimization, delivering reliable and maintainable digital solutions.

SKILLS

- **Languages:** JavaScript/TypeScript
- **Frontend:** React.js, Next.js, Jest, React testing library, Tailwind, CSS, Storybook, Redux
- **Backend:** Node.js, Nest.js, Express.js, TypeORM, Sequelize, GraphQL, Jest, Supertest
- **Database:** MySQL, PostgreSQL, Oracle, MongoDB, DynamoDB, Redis
- **DevOps:** Docker, GitHub Actions, Terraform, Kubernetes
- **Observability:** Prometheus, OpenTelemetry, Grafana, Elasticsearch, Kibana, Logstash

PROJECTS

CRM Microservice Platform

GitHub:

https://github.com/MartirisYordenisGuzman/crm_microservice_kafka_grpc

Designed a distributed CRM platform using a microservices architecture with gRPC communication and event-driven messaging.

- Implemented a CRM microservice system using Node.js, TypeScript, gRPC, and Apache Kafka for high-performance service communication.
- Designed an event-driven architecture allowing services to communicate asynchronously through Kafka topics.
- Built scalable services handling customer management, business events, and distributed processing.
- Structured the project using clean architecture and service-oriented patterns.

Tech

- **Backend:** TypeScript, Node.js
- **Service Communication:** gRPC, Apache Kafka
- **Architecture:** Microservices Architecture
- **Databases:** PostgreSQL, Redis
- **ORM:** TypeORM
- **Infrastructure:** Docker
- **Observability:** Elasticsearch, Kibana, Logstash, Prometheus

Freelancer Finance Manager

GitHub:

<https://github.com/MartirisYordenisGuzman/react-freelancer-finance-manager>

Developed a frontend application to help freelancers manage finances, track income, and visualize financial data.

- Built a responsive web application using React and modern frontend practices.
- Implemented components for income tracking, financial dashboards, and expense visualization.
- Designed reusable UI components to maintain scalability and clean code structure.
- Applied modern state management and modular frontend architecture.

Tech

- **Frontend:** React, Next.js
- **State Management:** Redux, Redux Toolkit
- **Programming Languages:** JavaScript, TypeScript
- **Styling / UI:** CSS, Sass, Responsive UI
- **Architecture:** Component-based Architecture

CRM Final Project System

GitHub:

https://github.com/MartirisYordenisGuzman/crm_aws_final-ts

Developed a CRM system focused on customer relationship management and business data organization.

- Built a full-stack CRM system using TypeScript and modern web development practices.
- Implemented modules for client management, data operations, and business workflows.
- Designed the application using layered architecture principles for maintainability.
- Integrated backend logic and frontend feature to support CRM operations.

Tech

- **Backend:** TypeScript, Node.js, Express.js
- **API Architecture:** REST APIs
- **Databases:** MySQL
- **Caching:** Redis
- **ORM:** TypeORM
- **Testing:** Jest
- **Cloud Services:** AWS (KMS, S3, SES, SSM)
- **Architecture:** Layered Architecture

Serverless Task Manager API

GitHub:

<https://github.com/MartirisYordenisGuzman/serverless-framework-node>

Created a serverless task management API demonstrating cloud-native backend architecture.

- Developed a REST API for task management using Node.js and serverless architecture.
- Implemented CRUD operations for managing tasks operations.
- Designed the application to run on cloud functions with event-driven execution.
- Structured the project following clean backend architecture patterns.

Tech

- **Backend:** Node.js
- **Architecture:** Serverless Architecture
- **Framework:** Serverless Framework
- **API Architecture:** REST API
- **Cloud Services:** AWS (DynamoDB, Lambda, API Gateway)

RightBalance – Full-Stack Finance Platform

GitHub:

https://github.com/MartirisYordenisGuzman/rightbalance_node_react

Built a full-stack application for financial management combining backend services and a modern frontend.

- Developed a full-stack system using Node.js and React.
- Implemented financial tracking features and user interfaces for managing financial information.
- Designed REST APIs for communication between frontend and backend services.
- Structured the project following separation of concerns and modular architecture.

Tech

- **Programming Language:** TypeScript
- **Backend:** Node.js
- **API Architecture:** REST APIs
- **Cloud Services:** AWS (DynamoDB, Lambda, API Gateway)
- **Testing:** Jest
- **Architecture:** Modular Architecture, Separation of Concerns

EXPERIENCE

ICT Enabler

UTESA – Higüey |

April 2025 – Aug 2025

Supported the integration of digital technologies in the educational environment by assisting teachers and students in the effective use of modern ICT tools. Facilitated the adoption of digital platforms and learning systems to improve productivity, collaboration, and digital literacy across the institution.

- Delivered technical workshops on digital platforms, productivity tools, and collaborative technologies to improve the adoption of ICT solutions in the classroom.
- Provided technical support for the configuration and use of educational software, learning management systems, and digital collaboration tools.
- Assisted in troubleshooting hardware and software issues, improving system reliability and minimizing disruptions in the learning environment.
- Promoted best practices for digital workflows and secure use of institutional technology resources.

Tech

- **Tools:** Microsoft Office, Microsoft Teams, Google Workspace.
- **Systems:** Educational Platforms, Learning Management systems.
- **Skills:** Technical Support, Digital Systems Training, Troubleshooting.

Substitute Teacher – Computer Science

Gregorio Luperón Polytechnic – Higüey |

May 2024 – Jun 2024

Delivered introductory computer science and digital literacy courses to secondary-level students, focusing on foundational computing concepts, productivity tools, and responsible technology use.

- Designed and delivered structured lessons on computer fundamentals, office automation, and digital tools.
- Introduced students to basic computing concepts and software usage, improving their digital competency.
- Created practical exercises and guided projects to strengthen hands-on experience with computer systems.
- Encouraged responsible and secure use of digital technologies in academic environments.

Tech

- **Tools:** Microsoft Office, Google Workspace
- **Skills:** Computer Fundamentals, Educational Technology

Data Entry Specialist (Digitador)

Gregorio Luperón Polytechnic – Higüey |

Aug 2023 – Sep 2024

Managed and maintained academic and administrative records, ensuring data accuracy, consistency, and confidentiality within institutional information systems.

- Maintained and updated institutional databases with academic and administrative information.
- Improved data organization and document management processes to increase operational efficiency.
- Ensured high accuracy in data entry and verification processes for institutional records.
- Supported digital recordkeeping and archiving processes while maintaining data confidentiality.

Tech

- **Tools:** Microsoft Excel, Office Suite
- **Systems:** Academic information Systems
- **Skills:** Data Management, Data validation, Information Organization

EDUCATION

B.S. in Computer Science | UASD | 2023 - 2027 (Expected)

CERTIFICATES

B.S. in Computer Science | UASD | 2023 - 2027 (Expected)

- Advanced Full Stack Web Development (Talento Digital) | 2026 (Expected).
- Web Development Bootcamp (Talending) | 2023
- Front-End Developer (Carlos's Slim Foundation) | 2023
- Object-Oriented Programmer (Carlos's Slim Foundation) | 2023
- HTML and CSS in depth (Meta) | 2023
- Programming with JavaScript (Meta) | 2023
- Introduction to Front-End Development (Meta) | 2023
- Version Control (Meta) | 2023
- Responsive Web Design (FreeCodeCamp) | 2023
